

How to cure a wooden mate gourd

- 1: Wash the interior of the gourd with warm water
- 2: Fill the gourd with moist yerba (it can be yerba that has already been used), add warm water and leave to sit
- 3: The following day, remove the yerba and with a small spoon gently scrape the inside of the gourd to remove any loose material that may exist
- 4: Repeat this process from the beginning without washing the interior of the gourd...2 times will be sufficient to fully cure the gourd
